# FEATURES OF TRAILPAD

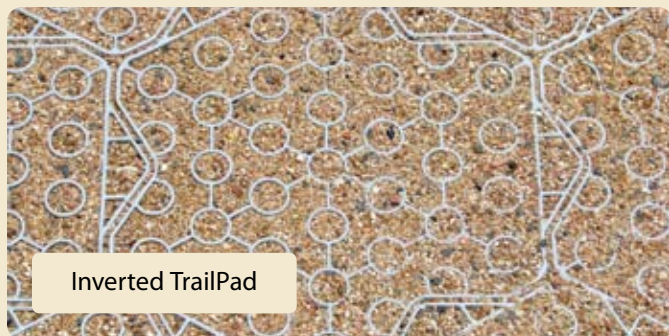

The panel system is installed just under the ground surface providing a firm underfoot feeling and maximum grip without the visual impact of a fully exposed track product. The product can be colour matched to the natural surrounds.

A critical feature is that in combination with the holes, the grip lugs trap and retain material on the top surface ensuring the product remains covered, reducing dramatically the visual impact on the environment.

The interconnected panel system connects in a hexagonal matrix pattern delivering exceptional strength yet allowing sufficient flexibility to follow the natural terrain.

The panel interconnection is achieved via a twist locking key pin with a hex head. The twist lock incorporates a ¼ turn self-tightening mechanism that maintains panel surface alignment to within 1mm ensuring no trip hazards will occur from misalignment.

The hexagonal design allows for almost infinite directional changes allowing for track builders to follow the natural flow of the land. Panels are able to be cut with either hand or power tools for neat fitting around natural features and edge filling if required.

Inverted TrailPad

This TrailPad can also be installed in an inverted manner, including the use of inverted pins - this is especially suited to areas where the extra weight of the sand or gravel will assist with the installation and operation.

During Installation

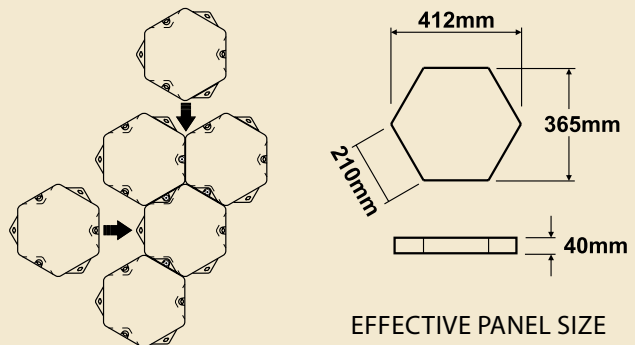

Before Backfill

## PANEL DETAILS:

- Panel Weight: 1kg
- Coverage: 8.62 panels/m<sup>2</sup>
- Tread Depth: 3mm
- Colour: 100% Recycled Plastic = Black  
Virgin Plastic = Birch Grey  
Other colours on request
- Panel Material: U.V. Stabilised Polypropylene
- Manufactured In: Australia
- Tested to AS/NZS4586**

Designed for pedestrian use only.  
Not intended for vehicular traffic.
