

HYBRID TOILET SYSTEM VENTILATION

12V FLAT FAN KIT

The 12V Flat Fan with a vent cowl at the top is an efficient and effective ventilation solution for the Hybrid Toilet System.

The 12V Flat Fan now has a new housing, new screens, and a new fan.

This model is quieter and the fan can be easily removed for cleaning.

The new model can also retrofit your current set up.

RULE IN-LINE FAN

The Rule In-line fan is installed at ground level which is great for WH&S. The kit includes two Fernco couplings for easy installation and removal.

Fans are available in both 12 and 24 volt, with a power consumption of 4 AMP when the flow rate is 235 CFM at open flow.

With a vent cowl at the top, it is an effective and efficient solution.

Prior to sending out fans, we soak the motor in CRC Soft Seal to add further corrosion resistance.

We install a low voltage cut-off switch and a timer, so you can set the fan to only operate between 6.00am - 9.00am and 3.00pm - 7.00pm, saving on power.
